Intelligent 237-Bit EEPROM Counter for > 20000 Units with Security Logic and High Security Authentication

Features

- Member of Eurochip Family with focus on state of the art security features
- 221 bit EEPROM and 16 bit ROM
  - 104 bit user memory
    - 64 bit Identification Area consisting of
      - 16 bit Manufacturer Code for unique identification of application
      - SLE 6636:
        - 8 bit Manufacturer data, card issuer dependent (ROM)
        - 40 bit for personalization data of card issuer (PROM)
      - SLE 6636E:
        - 48 bit for personalization data of card issuer (PROM)
        - 40 bit Counter Area including 1 bit for personalization (PROM/EEPROM)
    - 133 bit additional memory for advanced features
      - 4 bit Counter Backup (anti-tearing flags)
      - 1 bit initiation flag for Authentication Key 2
      - 16 bit Data Area 1 for free user access
      - 48 bit Authentication Key 1
      - either 48 bit Data Area 2 for user defined data
        or 48 bit Authentication Key 2
      - 16 bit Data Area 3 for free user access
- Counter with up to 33352 count units
  - Five stage abacus counter
  - Due to testing purposes a maximum of 21064 count units is guaranteed
- Counter tearing protection fully compatible with Eurochip Family
  - Backup feature activated at choice by the terminal
    Note: Counter tearing protection may be disabled permanently during the manufacturing phase on customer demand (Backup bits always „1“)
- High security authentication unit
  Individual card authentication based on Extended Authentication mode of Eurochip 2
  - Individual secret Authentication Key 1
  - Optional individual secret Authentication Key 2
  - Random number as challenge
  - Calculation of up to 16 bit response
  - Optional Response calculation with Cipher Block Chaining
  - Certification of the counter value
  - Calculation of a 16 bit response within 30 ms at a clock frequency of 100 kHz
- Transport Code protection for delivery
Features (cont’d)

- Chip circuitry and chip layout optimised for high security against physical and electrical signal analysis

Advanced 1.2 µm CMOS-technology optimised for security layout

- EEPROM-cells protected by shield
- Secure wiring for all security relevant signals
- Shielding of deeper layers via metal
- Sensory and logical security functions
- No isolation on backside necessary

Sophisticated electrical characteristics

- Ambient temperature –40 … +80°C
- Supply voltage 5 V ± 10 % (Class A)
- Supply current < 1 mA (typical 400 µA)
- EEPROM programming time 5 ms
- ESD protection typical 4,000 V
- Endurance minimum 100,000 write/erase cycles / bit\(^1\)
- Data retention for minimum of 30 years\(^1\)
- Contact configuration and Answer-to-Reset (synchronous transmission) in accordance to standard ISO/IEC 7816

2 General Description

SLE 6636/36E is designed for applications in prepaid telephone cards. The chip consists of an EEPROM memory of 221 bit, a ROM of 16 or 24 bits respectively, a control/security unit and a special computing unit for chip authentication.

![Block Diagram]

- **Memory Unit**
  - Manufacturer Code (16-Bit Code) and Manufacturer Data (3rd Byte) for unique coding of an application. For SLE 6636E it's recommended to use the 3rd byte for administration purpose to uniquely identify the application by the 16-bit manufacturer code and the 3rd byte;
  - Identification Data (e.g. serial number, expiry date);
  - Counter;
  - Data Areas.

- **Address Unit**
  Setting of the address counter is synchronously with the CLK.

- **Programming Unit**
  The programming voltage for the EEPROM/PROM is generated internally.
• **Backup Unit**
  Tearing a card out of a reader is indicated optionally.
  **Note:** The product can be delivered with this feature permanently disabled in manufacturing phase (Backup bits always „1“)

• **Authentication Unit**
  The secret algorithm offers a challenge & response procedure for individual card authentication based on the Extended Authentication Mode of Eurochip 2; the optional use of Cipher Block Chaining allows the certification of a counter decreasing procedure.

• **Security Interface**
  Ensures a minimum and a maximum frequency and proper logical voltage levels controlled by sensors.

3 Migration
SLE 6636/36E is a Member of Infineon’s Telecom ICs family.

**Sophisticated technology**
IMEM ratio technology offers sophisticated security features compared to NMOS technology. Due to low power consumption SLE 6636/36E is suited best for line-powered phones.

**Functional compatibility**
Identification and Counter fully functional compatible with existing members of Eurochip Family and SLE 4406S/06SE products for easy upgrade to higher security levels.
Authentication fully compatible with Extended Authentication Mode of Eurochip 2.

**Security by authentication**
Use of authentication is optional and controlled by the terminal. This allows smooth upgrade of the terminals with a Security Access Module (SAM).
